- High-performance LED optic guarantees precision control
- Works with MAC and PC

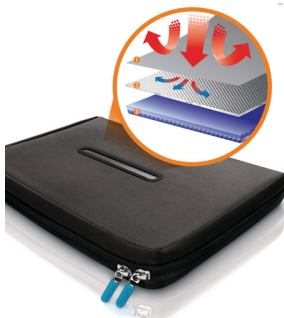

Take me anywhere

- Wide mouth, easy to slip your netbook in

PHILIPS

Highlights

HeatProtect prevents heat

You use your netbook on your lap to watch videos on a train, listen to music at the beach and browse the net, chat with friends or work on documents when you are at the airport. But over time the heat generated from sustained use makes your legs feel uncomfortable and could damage your netbook. Philips HeatProtect protects you and your netbook by keeping you both cool with its layer of aluminum to disperse the heat from your netbook, rigid surface to give it the air circulation it needs and an insulating layer to protect you from high temperatures.

Adjustable size to fit you

The mouse height can be adjusted so that it could fit perfectly into your palm. Also this is a mouse which also fits for children to use since the height can be adjustable.

Comfortable to use on your lap

Soft comfortable underside for your lap

Hidden USB cable option

The cable is stored inside the mouse

Stable surface for the netbook

If you use a magazine as a desk on your lap it is very slippery and is not a stable surface for your netbook, especially when you want to assume a comfortable position for your body. And you might damage your netbook if it slides off. The Philips Netbook Sleeve has a flat top surface for your netbook and a soft underside for your lap, so you can keep your netbook stable and secure while you watch YouTube, listen to music or work on documents anywhere you go.

Easy to slip your netbook in

Philips Netbook sleeve has three sides opening, so you can slip your netbook in easily.
